Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

How many MW is a 200 MW battery system?

The 200 MWh battery system in this estimate is comprised of four hours of 50 MW output. The mechanical equipment for the solar portion is the same as a stand-alone solar PV facility: 500-watt 1500-V monocrystalline modules, ground mounted racking with driven pile foundations, and independent single-axis tracking equipment.

What is the Electricity Market Module?

The Electricity Market Module is a submodule within the EIA's National Energy Modeling System, a computer-based energy supply modeling system used for the EIA's Annual Energy Outlook and other analyses.

How many kW is a central inverter?

Central inverters currently used in new projects are typically rated between 1,500 kW and 4000 kW. This system uses one 2500-kW central inverter with one integrated 2.5 MVA medium-voltage transformer within each PV block.
