-----

The Bidirectional Charging project, which began in May 2019, aimed to develop an intelligent bidirectional charging management system and associated EV components to ...

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from renewable energy systems (RE systems) using bi-directional electric vehicles ...

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from renewable energy systems (RE ...

This paper presents a novel PV-tied Adaptable Z-Source Inverter (AZSI) for multiport EV charging. The modified split capacitor Z-source impedance networks ensure ...

The solar-powered bidirectional charging system for electric vehicles is a ground-breaking solution at the confluence of sustainable mobility and energy efficiency.

By addressing these factors, the paper aims to provide an initial roadmap for realizing the practical benefits of bidirectional charging technology in Dresden's urban context, contributing ...

In her keynote speech, she explained that bidirectional charging technology not only enables a higher share of renewable energy in the energy mix but also contributes to ...

This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

Electric vehicle (EV) charging infrastructure has led to the advancement of grid-tied photovoltaic (PV) battery

energy systems (BES) that support bidirectional

Smart charging stations, bidirectional charging capabilities, and grid-responsive energy management systems have been proposed as key solutions to ensure that EV adoption does ...

The case study focuses on rural distribution grids in Southern Germany, projecting the repercussions of different charging scenarios by 2040. Besides a Vehicle-to-Grid scenario, ...
