From 2018 through 2022, solar parts were the dominant export earner among China's clean energy suite, but since then a drop-off in ...

The "new three" has been a buzzword among Chinese officials and state media recently, as they highlight the strong performance of solar cells, lithium-ion batteries and ...

In this article, we consider trade of three key minerals needed for batteries--graphite, lithium, and cobalt--among China and key global regions.

In 2023, Chinese investment into battery capacity increased by nearly 30%, shifting from EVs to energy storage systems (ESS). What's ...

EVs and batteries are now worth more than double the value of China's solar PV exports. This milestone is remarkable because it comes ...

In 2023, Chinese investment into battery capacity increased by nearly 30%, shifting from EVs to energy storage systems (ESS). What's more, China's planned energy storage ...

Batteries have been China's largest clean-technology export since 2022, overtaking solar panels. Growth may continue as Infolink expects global energy storage cell ...

As of April 2025, China's solar battery component export value reached 22.49 billion USD, showing a year-on-year decrease of ...

From 2018 through 2022, solar parts were the dominant export earner among China's clean energy suite, but
