Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

How has the energy crisis impacted the Czech Republic?

With coal dominating the energy mix, the Czech Republic has traditionally enjoyed low electricity prices and a steady supply of domestic fuel. However, the recent energy crisis, together with pressure from stakeholders and regulatory bodies to decarbonise, has triggered an unprecedented shift in the country's energy market.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

The European Commission (EC) has approved the Czech Republic's plan for a EUR-279-million (USD 303.7m) state aid programme that will enable the deployment of at ...

Boosting energy storage will allow Czechia to improve its energy security and reduce reliance on gas and coal imports, two key sources in its current energy mix. Moreover, ...

It will be open to all energy storage technologies that are directly connected to the transmission or distribution network, and will support the European Commission's 2024-2029 ...

By electronic notification of 13 February 2025, the Czech authorities notified a measure to support electricity storage (Akumulace elektrické energie, the "measure") under the Temporary Crisis ...

With EUR279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current storage capabilities and accelerate its ...

In an announcement released on March 7, 2025, the executive arm of the European Union said that the Czech scheme will support the installation of at least 1.5 GWh of ...

To meet the demanding requirements of the Czech grid, AlphaESS is supplying the Aster 5000, a 5MWh liquid-cooled energy storage system designed for reliability, rapid ...

In the Czech Republic, we are currently implementing a 1MW/ 2MWh project for Hennlich, among many others. Previously, we helped the country's leading wood processing plant to reduce ...

It will be open to all energy storage technologies that are directly connected to the transmission or distribution network, and will ...

In the Czech Republic, we are currently implementing a 1MW/ 2MWh project for Hennlich, among many others. Previously, we helped the country's ...

Within a few years, a nanomaterial developed by Olomouc scientists, which turned out to be very suitable for devices storing ...

Within a few years, a nanomaterial developed by Olomouc scientists, which turned out to be very suitable for devices storing electrical energy--supercapacitors, could be ...
