Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.

Do lead-acid batteries need maintenance?

Lead-acid batteries discharge over time even when not in use, and prolonged discharge can permanently damage them. By following these maintenance practices, you can significantly extend the life of your lead-acid batteries and ensure optimal performance in all your applications.

How do you maintain a lead-acid battery?

By following these maintenance practices, you can significantly extend the life of your lead-acid batteries and ensure optimal performance in all your applications. Store batteries in a cool, dry place. The ideal temperature for storage is between 10°C and 25°C.

What is the difference between lead-acid battery production and Li-ion battery production?

For volatile organic compounds (VOC), carbon monoxide (CO), nitrogen oxides (NO<sub>x</sub>), particulate matter (PM) and sulfur oxides (SO<sub>x</sub>), emissions for Li-ion battery production are in all cases higher than for lead-acid battery production.
