Solar control glass is a type of high-performance glazing that reduces the amount of solar heat entering a building. Filtering infrared ...

The technology behind solar control and low emissivity is a thin transparent coating of metallic oxides, deposited on one or two glass panes of a double or triple glazing unit.

Pilkington Eclipse Advantage(TM) is a range of high performance solar control on-line coated clear or body-tinted glass, with unique colours and low ...

The Solarvolt BIPV glass system replaces traditional facade cladding materials and enhances commercial building exteriors by providing sunshading, overhead glazing, CO2-free power ...

The Solarvolt BIPV glass system replaces traditional facade cladding materials and enhances commercial building exteriors by providing ...

With its ability to block 60% of solar energy while allowing 70% of visible light to pass through, Solarban(R) 60 glass can help you provide year-round ...

Several solar control glass types offer different levels of light and heat transmission. This is achieved by using body tinted glass ...

Solar control glass can help mitigate glare from the sun and increase the visual comfort of building occupants, particularly if a glazed facade is directly exposed to the sun and with a high window ...

Several solar control glass types offer different levels of light and heat transmission. This is achieved by using body tinted glass or special reflective coatings. These options support ...

Pilkington Eclipse Advantage(TM) is a range of high performance solar control on-line coated clear or body-tinted glass, with unique colours and low-emissivity properties.

The combination of high light reflectance and low light transmittance provides internal privacy, even in buildings with large, glazed areas. REFLECTASOL (R) can be used as well for external ...

Solar control glass is a type of high-performance glazing that reduces the amount of solar heat entering a building. Filtering infrared radiation and reflecting excessive heat ...
