-----

It will be built on a 300-hectare plot in the central municipality of Jaunjelgava, with construction scheduled to begin in summer 2024 and the first electricity generation expected in ...

The Park will consist of 240,000 solar panels, with a total capacity of 148 MW, and be able to produce around 154,550 MWh annually, providing electricity equivalent to the ...

Latvia has set ambitious climate goals, aiming to source 57% of its electricity from renewable resources by 2030, according to the International Energy Agency (IEA). However, ...

In 2024, solar power in Latvia grew over 3.1 times to 6.7% of total electricity, becoming the third-largest source, while wind reached a record 38 GWh and hydropower, ...

Using Monte Carlo simulations and stochastic modeling, the research incorporates key economic parameters such as CAPEX, OPEX, and discount rates to assess future LCOE ...

The Park will consist of 240,000 solar panels, with a total capacity of 148 MW, and be able to produce around 154,550 MWh ...

Latvia has set ambitious climate goals, aiming to source 57% of its electricity from renewable resources by 2030, according to the ...

With the advent of new technologies, people are beginning to realize that energy is no longer just a state-controlled resource; for example, more and more households are ...

Driven by the active installation of solar panels and development of solar parks, the amount of electricity
