---

In this study, we propose a full life-cycle cost model, named the F-LCC model, for calculating the cost of the solar energy system on the long term, e.g., 20-30 years.

As the solar industry continues to grow and mature, more and more attention is being paid to a solar system's residual value - or the value of the system at the end of a ...

To determine the overall value of the solar modules from an installation, it is compulsory to understand the factors influencing the residual value in the solar modules as ...

It provides general recommendations to assess whether to resell or recycle used solar panels. The first step in your assessment to determine whether to resell or recycle used ...

To justify such value retention efforts, the temporal dimension is essential yet underexplored. This study uses Time-Explicit Life Cycle Assessment and Costing to investigate when, which ...

The price index tracks wholesale pricing and supply of crystalline-silicon solar modules that have fallen out of traditional distribution channels, and as a result are listed for ...

Between the end of the contracted life and the end of the financial life, the asset produces a residual value (RV) of net earnings.

Tracking salvage values can help to represent the reliability of a particular technology, the manufacturer and model of PV modules. There exists a secondary market for used modules ...

Residual value refers to the anticipated worth of solar panels post the depreciation period, typically around 25 years. Factors such as ongoing maintenance and the technological ...
