Using focus groups and a survey with the renewable energy and storage sector, we document perspectives on the critical barriers, innovative solutions and policy gaps identified ...

We represent Ireland and Northern Ireland's energy storage industry bringing together exciting new technologies and innovations that will help decarbonise our energy system and support a ...

We represent Ireland and Northern Ireland's energy storage industry bringing together exciting new technologies and innovations that will help ...

Domestic battery storage is a rapidly evolving technology that is typically used alongside solar photovoltaic (PV)*. It allows surplus electricity generated by solar panels to be stored for later ...

The proposed development is designed to use iron-air battery technology supplied by US-based Form Energy capable of discharging energy at its full power output for up to 100 ...

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key ...

We are proposing to use an iron-air battery capable of storing energy for up to 100 hours at around one-tenth the cost of lithium ion for our projects. This form of multi-day storage is made ...

They balance renewable generation, support stability, and enable the 24/7 clean energy future we're all aiming for. But despite years of discussion and technical progress, ...

We currently have more than 300MWs of battery storage capacity in operation in Ireland, making it one of the

largest battery portfolios in Europe. We plan to develop a pipeline of large scale ...

The report identified 155 projects with a total storage capacity of almost 10GW, that either have planning permission, are currently in the planning system or are in pre-planning ...

Today's conference heard from a range of stakeholders across the renewable sector, discussing the potential role of energy storage in the Irish energy transition, and the ...
