---

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is ...

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

When was the solar system formed? And are there more solar systems in the universe? We've gathered the most important facts and discoveries about ...

Its gravity holds the solar system together, keeping everything in its orbit. Almost all (99.8%) of the mass in the solar system is contained within the Sun.

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as ...

The solar system includes the Sun, planets, dwarf planets, moons, rings, asteroids, comets, and particles of dust.

It consists of the sun, eight planets and their moons, an asteroid belt, and other celestial bodies such as comets. The four planets closest to the sun--Mercury, Venus, Earth, and Mars--are ...

Thanks in part to the commercial sector, there have been substantial advances in solar cell and solar array technologies that have enabled some outer planet missions, such as ...

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus ...

Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

NASA Solar System Exploration Our Galactic Neighborhood Solar System Planets Moons Asteroids, Comets & Meteors

Facts About Jupiter Jupiter is the largest and oldest planet in our solar system. If Jupiter was a hollow shell, 1,000 Earths could fit inside. But the "King of Planets" is no ...
