Could solar power be a new source of growth in Japan?

The rise of solar power could give them a new source of growth. Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more than 3mn residential solar systems installed last year. Demand for a similar number of residential batteries should follow soon.

Can China's 'excess' solar power help Japan shift away from fossil fuels?

Ember even put out a report arguing that China's "excess" solar capacity can help countries like Japan shift away from fossil fuels. In fact, Japan's expansion of solar since it halted all nuclear plants in the wake of the 2011 Great East Japan Earthquake and Fukushima meltdown has been mostly due to Chinese-made solar panels.

Why should power electronics be integrated with energy storage systems?

Power electronics technology enhances flexibility and resilience in the electrical grid. Integrating power electronics with energy storage systems offers the opportunity to reduce energy costs, achieve a cleaner energy mix, improve performance, and improve safety. (Blinov and Williamson, 2022).

The evolution of policies and regulations supporting battery energy storage system (BESS) development, utilization, and sustainability to enhance resource adequacy was ...

The transition from LiBs to SiBs represents a significant strategic pivot in Japan's energy storage policies, with wide-ranging implications for supply chain resilience, ...

China's energy storage firms are increasingly looking to expand their global presence, particularly in markets that offer unique policy incentives and business models, such ...

New solar installations reached a new record high, becoming the largest and fastest growing power source in terms of new installations. ...

That's the new energy storage challenge China and Japan are tackling through cutting-edge network solutions.

With climate targets looming, these neighbors are rewriting the rules of ...

Climate groups commend China's rapid expansion of solar, wind, and EVs, but there are major human rights and sustainability concerns linked to Chinese production of solar ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more than 3mn residential solar systems ...

The transition from LiBs to SiBs represents a significant strategic pivot in Japan's energy storage policies, with wide-ranging ...

New solar installations reached a new record high, becoming the largest and fastest growing power source in terms of new installations. From the amount of installed capacity, it is ...

Japan and Europe, which used to be world leaders in solar, saw some companies either go bankrupt or move their manufacturing to ...

TOKYO -- Foreign companies are piling into battery energy storage in Japan as they seek to gain an early-mover advantage in a market they expect to grow along with the ...
