What is a base class for a sonnet module?

Base class for Sonnet modules. A Sonnet module is a lightweight container for variables and other modules. Modules typically define one or more "forward" methods (e.g. `__call__`) which apply operations combining user input and module parameters. For example:

How does sonnet work on a Mac mini?

In a single Mac mini configuration, the Sonnet solution's air dam and strategically placed seals help keep air from circulating in the unoccupied computer bay. Whether you install one or two Mac minis, RackMac mini prevents recirculation of hot air around the computers to keep them ambient temperature chill and operating reliably.
