What are onshore wind farms in Spain?

Onshore wind farms in Spain are installed in locations where there is expected to be an adequate amount of wind. These farms are made up of wind turbines, transformers and an electrical substation. Together, they work to convert air currents into electricity that we use in our homes and businesses.

What is the capacity of a wind farm in Spain?

Wind power has grown to become the most efficient renewable energy source during the past two decades. In addition to the number of wind turbines, the capacity of the individual units has grown enormously. In Spain, RWE has an installed capacity for onshore wind of more than 450 MW. Are you interested in leasing your land for an onshore wind farm?

What is the share of wind energy in Spain's electricity generation mix?

The share of wind energy in the electricity generation mix amounted to around 23% in 2021. According to the Spain Wind Energy Association's (AEE) statistics in 2020, wind energy accounted for about 27,446 MW of accumulated capacity. Moreover, as of 2020, wind energy was the second-largest source in the renewable energy mix.

Does Spain need wind power?

On specific occasions, the contribution of wind power in Spain reached 50% of the total electricity demand, indicating the sector's capacity to meet a substantial portion of the country's energy needs. *Includes 11 MW of Wind-Hydro hybrid system and associated generation of 1 GWh in 2014, 9 GWh in 2015.

Onshore wind dominated the Spain wind energy market share at 100.0% in 2024, the legacy of two decades of feed-in tariffs that filled ...

Albacete leads Castile-La Mancha in terms of installed wind power capacity, with a total of 795 MW of renewable energy. This places it at the forefront, both regionally and nationally, in terms ...
