HGM6120T Genset Controller integrates digital, intelligent and network technology, which is used for the automation and monitoring system of ...

To reduce the extra power consumption due to frequent sleep mode switching of base stations, a sleep mode switching decision algorithm is proposed. The algorithm reduces ...

First, hybrid prediction scheme, composed of long short term memory (LSTM) and historical average value (HAV), is used to predict the traffic demand of each BS. Based on the ...

Communication base station power monitoring and control system based on intelligent platform management interface, which includes multiple business unit electromechanical management...

Network Optimization is a vital function in mobile network management, and the Base Station Controller (BSC) plays a critical role in this process. The BSC is responsible for ...

Using intelligent power management technology, it can realize intelligent power supply to communication equipment, providing ...

HGM6120T Genset Controller integrates digital, intelligent and network technology, which is used for the automation and monitoring system of single unit, realizing the automatic start/stop, data ...

This article discusses the elements of a monitoring-and-control solution for the PA using discrete components and describes an integrated solution.

The primary function of the base station controller is to oversee the operations of the base transceiver stations.
