What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

What is a dynamic uninterruptible power supply?

For large power units, dynamic uninterruptible power supplies (DUPS) are sometimes used. A synchronous motor/alternator is connected on the mains via a choke. Energy is stored in a flywheel. When the mains power fails, an eddy-current regulation maintains the power on the load as long as the flywheel's energy is not exhausted.

What is a multi kilowatt UPS system?

Multi-kilowatt commercial UPS systems with large and easily accessible battery banks are capable of isolating and testing individual cells within a battery string, which consists of either combined-cell battery units (such as 12 V lead acid batteries) or individual chemical cells wired in series.

If you want to protect your computer, or any other equipment from an unexpected power disruption, and data loss, start by searching our CyprusUPS portal!

With a UPS from Eshop-cy, you can ensure uninterrupted power supply during outages or fluctuations. Their UPS systems provide reliable backup power, allowing you to continue ...
