To reference a variable in a variable group, you can use macro syntax or a runtime expression. In the following examples, the group my-variable-group has a variable named ...

Learn how to manage Microsoft Fabric variable libraries to customize and share item configurations in a workspace.

PowerShell includes the `$PSItem` variable and its alias, `$_`, as automatic variables in scriptblocks that process the current object, such as in the pipeline. This article uses `$PSItem` in the ...

The value can be a constant or an expression, but it must either match the variable declaration type or be implicitly convertible to that type. For more information, see Expressions.

The `New-Variable` cmdlet creates a new variable in PowerShell. You can assign a value to the variable while creating it or assign or change the value after it is created.

When you use a variable in a template that isn't marked as available in templates, the variable doesn't render. The variable doesn't render because its value isn't accessible within the ...

User-defined variables can be set as read-only. There are naming restrictions for variables (example: you can't use `secret` at the start of a variable name).

Working with variables To create a new variable, use an assignment statement to assign a value to the variable. You don't have to declare the variable before using it. The default value of all ...

To delete a variable, along with its value, use `Remove-Variable` or `Remove-Item`. This cmdlet does not delete the values of variables that are set as constants or owned by the system, even ...

Follow the steps for creating a variable library and using variable values in various stages of a deployment pipeline.
