-----  
What type of battery should I use?

The most commonly used battery of all is an alkaline battery (meaning it contains an alkaline electrolyte, usually potassium hydroxide). Best use: "Low-drain" devices such as LED headlamps, LED flashlights, toys, remote control devices, clocks and radios, and even moderate-drain items such as lights using incandescent bulbs.

What are the different types of single-use batteries?

The two main types of single-use batteries are alkaline and lithium. Pros: Cheaper upfront cost than rechargeable batteries. Very low self-discharge rate (power loss when not in use) for a long shelf life. Widely available. Cons: Require disposal after fully discharged.

Can you put a battery in a fire?

Never put batteries into a fire. Doing so could cause them to rupture and spill their contents. Also: Avoid tossing them into a metal container where heat could build up. This battery guide lists pros and cons of the batteries (NiMHs, lithiums, alkalines and more) that power your outdoor devices.

What is a rechargeable battery?

Rechargeable Batteries: These batteries are built to be recharged over and over again, in some cases up to 500 times or more. The two main types of rechargeable batteries are nickel-metal hydride and lithium-ion. Pros: Because they're rechargeable, they generate less waste than single-use batteries.

Selecting the right battery involves balancing factors like duration, performance, cost, and environmental impact. This guide provides an in-depth look at different battery types, ...

Much lighter than lead-acid batteries, Li-ion batteries make devices more accessible to transport, which is especially beneficial for portable power stations outdoors or on the move. Li-ion ...

In this guide, we walk you through the options and include the pros and cons of different battery types as they relate specifically to outdoor users, like hikers, bikers, skiers and climbers.
