How many devices are connected to Valenciaport's 5G network?

The network has more than 25,000 connected devices. Valenciaport's 5G network will use n40 frequencies, frequencies regulated by the public administration, thus ensuring the privacy of the network in the port area and allowing for customised security, controlling the devices that are connected.

What frequencies does Valenciaport 5G use?

Valenciaport's 5G network will use n40 frequencies, frequencies regulated by the public administration, thus ensuring the privacy of the network in the port area and allowing for customised security, controlling the devices that are connected.

Where will 5G be available in Spain?

Spanish telecom operator Orange announced the activation of its 5G Standalone (SA) network in the country. In a release, the telco said that the new technology will be initially offered in Madrid, Barcelona, Valencia and Seville.

Will 5G SA become a smart port?

For Javier Gallego, head of Technologies at the PAV, 'our 5G SA network is one of the fundamental pillars to achieve the goal of becoming a definitive smart Port, based on two pillars: security and mobility'. The solution will integrate market-leading technologies and solutions with a 5G private network core in its Stand-Alone (SA) mode.

Valenciaport in Spain has announced the development of its own 5G network to connect more than 25,000 devices and establish itself ...

Valenciaport in Spain has announced the development of its own 5G network to connect more than 25,000 devices and establish itself as a "Smart Port". The 5G network at ...

Valenciaport's private 5G network connects 25,000 devices, enhancing cargo management, security, & efficiency at Europe's second-busiest port.
