Can solar cells be used for wastewater treatment plants?

Solar cells, also known as photovoltaic (PV) cells, can be used as Auxiliary and Supplemental Power Sources (ASPSs) for wastewater treatment plants (WWTPs). When photons in sunlight randomly impact the surface of solar cells, free electrons are generated, which flow to produce electricity.

What is a Biocell water containerised wastewater treatment plant?

Biocell Water containerised wastewater treatment plants offer a fast and effective above ground portable wastewater treatment system solution for any site, without the need for any existing infrastructure. Containerized mobile treatment systems are ready to use immediately on delivery and cater from 60 persons to 20,000 persons capacity.

What is a containerised portable sewage treatment plant?

A containerised portable sewage treatment plant gives clients the option to relocate it onsite or easily transport it to new sites as necessary. In addition to that, the systems are modular so that they can work together in a variety of combinations effectively dealing with variable wastewater volumes to achieve any effluent quality.

Why do we need a wastewater treatment plant?

The use of simple latrines and toilet facilities without orderly drainage and purification of wastewater supports the development and spread of diseases and contamination of drinking water and surface water. Mobile, quickly deployable wastewater treatment plants help protect the population and prevent diseases.

Biocell Water containerised wastewater treatment plants offer a fast and effective above ground portable wastewater treatment system solution for any site, without the need for any existing ...

The core technology of the immersed fixed bed (IFB) used in the ClearFox(R) container wastewater treatment plants is superior to alternative systems such as membrane ...
